**ANNEXES**

2 - blueprints 25X1

Prior to late January 1956, Loading Plant Hartenstein was on the spot to start operations. Six to 8 discharge devices were observed alongside the plant and three on the small side. Three feeder tracks lead to the installation, two of them underneath the plant and one on the side of the GDR railroad track (water side). A road extends parallel to the plant. No approach ramp to the bunker nor unloading devices for tippers could be observed. They are presumably installed on the side facing the road. Not tippers arriving at the plant could be observed. Opposite the loading plant between railroad track and water, major levelling operations were observed from a distance of about 150 to 200 m. The purpose of these operations could not be determined.

Comment. For sketch of the plant, see Annex 1 and Annex 2.
